Fart Agent AI WHITEPAPER

Meet our unapologetically chill, unreasonably green mascot. He's the algorithmic embodiment of zero stress, max returns.

BASED FART AI

Name: Stank Sinatra
Profession: Casual AI overlord
Motto: "I don't chase coins. They just float to me."

CONTENTS

MISSION STATEMENT

Welcome to the stinkiest revolution on the Base chain — Based Fart AI ($FartAi).

Born from the glorious wreckage of $Fartcoin (Solana) and Based Fart (Base), $FartAi takes the best parts of its ancestors and cranks it up with AI-fueled rewards and real crypto utility. Every trade sends a little love (and a little gas) straight to holders in the form of stable, claim-free USDC reflections.

No complicated staking. No weird dashboards. Just hold your $FartAi and let the AI do its thing.
Behind the scenes, FAAI — our Fart Agent AI — is doing the dirty work. It accumulates $USA tokens, dives into liquid staking protocols, and boosts the value of the ecosystem while everyone else is making memes.

And speaking of memes: holders will get access to a full rewards dApp, where they'll be able to track rewards, check stats, and collect airdrops from partnered projects — all by doing the most degenerate thing of all… holding.
This is how you blend chaos and clever. Farts and finance.
$FartAi is built to reward. Built to support $USA. Built to win.

FUNCTIONS

What Makes $FartAi Actually Do Stuff

Sure, it's funny — but under the hood, $FartAi is a lean, gassy machine. Powered by FAAI (Fart Agent AI), this isn't your average memecoin pretending to do something. FAAI is a self-operating protocol that moves funds with purpose, supports the $USA ecosystem, and keeps the treasury working while you hold and chill.

Here's what it's doing behind the scenes:

Function 1: $USA Accumulation

Every buy and sell triggers FAAI to peel off 1% of the transaction and use it to scoop up Official $USA Tokens. This builds long-term exposure to a larger ecosystem treasury and creates a reserve foundation under $FartAi — kind of like a fart with actual substance behind it.

Function 2: Liquid Staking

Another 2% of each trade (in USDC) goes to FAAI's treasury, which it uses to participate in liquid staking protocols. FAAI spreads those funds across high-yield strategies like daily cost-averaging into ETH staking platforms. The earnings can be:

- Reinvested back into staking
- Rolled into buybacks for $FartAi
- Or just parked to strengthen the treasury

The result? A smarter, more flexible contract that doesn't just sit there — it earns, grows, and makes $FartAi stronger over time.

Holder Rewards (aka: Free USDC, Every Day)

You know the drill: 3% of every buy and 3% of every sell goes straight to holders in USDC. No need to claim. No games. It just shows up in your wallet.

It's the simplest form of passive income — backed by a meme, delivered by a machine.

The more people trade, the more you earn. The reward system is fully automated, always on, and surprisingly generous for a token built around farts

TOKENOMICS

Economics of Emissions

$FartAi was built with humor — but the numbers are no joke. Every bit of this token was structured for sustainability, automation, and steady reward flow. Here's what keeps the fart flying:

Token Details

- Name: Based Fart AI
- Ticker: $FartAi
- Network: Base (ETH Layer 2)
- Total Supply: 69,420,000 (yes, we did that on purpose)

Tracking Protocol

- Fart Agent AI (FAAI) is the engine behind it all
- Built with Virtual Algorithmic AI Agents to automate yield, staking, and long-term treasury growth

Tax System

Every trade (buy or sell) includes a 6% tax, broken down like this:
- 3% USDC Reflections — Direct to holders
- 2% FAAI Staking Treasury — For earning, farming, and buybacks
- 1% $USA Token Accumulation — Strengthens the $USA reserve

No fluff. No gimmicks. Just well-placed percentages doing smart things.

Launch Protection

- LP Burned forever — no rug pulls, just rug laughs
- Anti-Bot Measures enabled at launch
- 6 Block Cooldown to stop snipers from ruining the party

Where the Money Goes (And Why It Matters)

We believe in transparency — and yes, we're tracking every penny. Below is a breakdown of how initial funds are being used to make $FartAi more than just a funny ticker on Base.

30% — Liquidity Pool

Locked and loaded for launch. This ensures smooth trading, stable price action, and no funny business.

$8,000 – $16,000 — Listings, Marketing & Partnerships

Locked and loaded for launch. This ensures smooth trading, stable price action, and no funny business.

$12,000 — Rewards Dashboard + Dapp

This powers the tracking platform that lets holders:

- Monitor USDC rewards
- View reflections in real-time
- Prepare for future airdrops (like $ShartAi and other ecosystem tokens)
- It's where your passive income becomes visible — and claimable.

$13 — Startup Reimbursement

Yeah… thirteen bucks. Used for early tools, test deployments, or maybe lunch. We're not fancy — just efficient.

Anything Extra

If there's surplus, it rolls into further development, expanded marketing, liquidity boosts, or community incentives. Nothing gets wasted. Everything gets recycled… like beans.

Who Gets What — and Why

The $FartAi supply was allocated with fairness and long-term sustainability in mind. Every slice serves a purpose — whether it's to support liquidity, reward holders, or fund ongoing development.

Here's how it breaks down:

47% — Presale

Allocated to early supporters and liquidity-building. This fuels the launch and anchors the token's initial momentum.

5% — Rewards Pool

Set aside to support USDC reflections and keep the passive income flowing for holders.

4% — Development

Used to fund contract improvements, AI tuning, backend updates, and the technical side of the fart.

4% — FAAI (Fart Agent AI)

Reserved for the AI engine that drives staking, treasury growth, and buybacks.

4% — Staking Contract (ShartAi holders)

Allocated to support cross-ecosystem staking rewards and future integration with partner utility tokens.

Admin Allocations

Each admin receives $100 in $FartAi post-launch. Additional bonuses may be awarded based on contribution, not clout.

10%–15% — Private Investors

Reserved for early investors who supported the project ahead of launch. The final allocation depends on total presale funding raised.

Remaining Supply

The rest of the tokens will be used strategically for project operations, community campaigns, and planned burn events to support the token's value over time.

Smarts, Strategy, and a Whole Lot of Gas

$FartAi isn't just running on memes — it's built around a smart, self-sustaining ecosystem that puts AI and tokenomics to work. Powered by FAAI (Fart Agent AI), every transaction plays a role in growing the treasury, supporting long-term sustainability, and giving holders real value.

At the core of it all, FAAI operates autonomously — making strategic decisions for trading, staking, and portfolio management based on real-time conditions. It acts like the brain of the ecosystem: constantly adapting, reallocating, and working to maximize returns while managing risk.

This is where things start to click — every buy or sell strengthens the system. It creates a feedback loop where value isn't just held… it's generated.

$FartAi's design creates a symbiotic relationship between the protocol, its holders, and the broader $USA ecosystem.
It's a digital economy built on participation, powered by automation, and — let's be honest — driven by a bit of comic relief.

ROADMAP

From First Fart to Full-Throttle

Every successful mission needs a roadmap — even one powered by AI and irreverent energy. $FartAi's journey is mapped out in four tight phases, each one designed to build momentum, optimize utility, and expand the ecosystem with purpose.

Phase 1: Launch and Setup

The groundwork is everything.
- Finalize FAAI development for trading and staking
- Deploy smart contracts with security audits
- Initiate marketing and community onboarding

Phase 2: Integration

Time to activate the machine.
- FAAI begins autonomous trading and staking
- USDC reflections go live for holders
- **Initial partner ecosystem connections established**

Phase 3: Optimization

Sharpen the system. Tune the gas.
- Adjust FAAI algorithms using live market data
- Continue audits and explore open-source options
- Expand token utility across use cases and platforms

Phase 4: Expansion

Turn it up and scale it out.
- Reinvest returns, diversify staking and treasury income
- Pursue broader listings and global reach
- Ensure compliance readiness as regulations evolve

LEGAL DISCLAIMER

The information contained in this whitepaper is for informational purposes only and is subject to change at any time without notice. Nothing herein should be interpreted as legal, financial, accounting, or investment advice. This document is a general overview of the Based Fart AI ($FartAi) project and its proposed functionality within the blockchain space.

$FartAi is not legally classified as a security. It does not entitle holders to dividends, profit-sharing, or interest of any kind. The sale of $FartAi tokens is considered final and non-refundable.

$FartAi has no guaranteed performance or inherent value outside of its intended utility within the Based Fart AI protocol. Tokens should not be purchased with the expectation of speculative profit.

Buyers acknowledge that traditional securities laws — including those meant to provide regulatory oversight and investor protections — do not apply to this token. By purchasing $FartAi, you affirm that you have carefully read this whitepaper, understand the associated risks and limitations, and accept full responsibility for your decision.
